ABOUT THE WORLDVIEW INSTITUTE

"The Worldview Institute, founded in 2016, is a Think Tank non-profit organisation promoting mindset change and sustainable Lifestyles. Through our diverse community initiatives, including entrepreneurship and human development training. Our achievements to date include:

- Starting a Worldview programme called **"Battle for the Mind"** on radio Christian
- Planting **6,400** trees in **110** schools across the Lusaka district
- Reforesting **1,200** trees in the National Park
- Replacing **30** manhole covers at Chilenje Market
- Successfully planting **500** trees along South Park Street in Lilayi
- Organising Leadership training for Business Leaders and Start-up entrepreneurs.

We are committed to catalyzing meaningful change and fostering a culture of sustainability, empowering individuals and communities to thrive."

ABOUT SHANGA

The Shanga Project, an implementing arm of our flagship programme called the Think Green Project, is a youth initiative aimed at teaching and involving young people in sustainability and environmental stewardship. As part of the larger Think Green Programme, which aims to plant 1,000,000 trees by the year 2030, the Shanga Project focuses on planting 150,000 trees in Zambian schools, with a total projected cost of **K9,750,000**. Our target is to reach 1500 schools across the country.

LUSAKA PROVINCE-PHASE 1

The Shanga Project in Lusaka Province has completed phase one of its implementation. This phase involved planting 6400 trees across six districts in the province, namely Chongwe, Luangwa, Rufunsa, Lusaka, Chilanga, and Kafue. The total cost of this phase amounted to **K416,000**.

ACHIEVEMENTS

The project's achievements align with the SMART (Specific, Measurable, Achievable, Relevant, Time-bound) approach:

SMART

Community Impact

The impact of the Shanga Project extends beyond the school environment to the wider community. The Worldview Institute, as part of its commitment to community engagement, has been actively involved in supporting small-scale businesswomen and youths by purchasing trees from them. This initiative contributes to these individuals' economic empowerment and enhances community resilience by promoting sustainable livelihoods and environmental conservation practices.

The Shanga Project has fostered a sense of collective responsibility towards environmental sustainability by integrating community engagement into its activities. Through partnerships with local stakeholders, the project has created a ripple effect, inspiring broader community involvement in tree planting and environmental conservation efforts.

Youth Impact

The Shanga Project's approach towards youth involvement has been multifaceted, aiming not only at tree planting but also at fostering a sense of ownership and responsibility towards environmental sustainability. By encouraging youths to adopt trees, the project has instilled a worldview that sees trees as vital assets for ensuring sustainability and reducing mortality rates among the planted trees. This approach has significantly contributed to shifting the mindsets of the youths towards environmental stewardship.

The participation of pupils in tree adoption has been highly inspiring and impactful. Witnessing young individuals actively engage in nurturing and caring for trees not only fosters a sense of environmental responsibility but also empowers them with practical skills and knowledge about sustainable practices.

Environmental Impact

The environmental impact of the Shanga project is significant. By planting trees across various districts, the initiative has contributed to mitigating deforestation, improving air quality, and conserving biodiversity. Moreover, the reforestation efforts can potentially restore ecological balance and enhance the resilience of ecosystems in the long term.

Project Challenges

Despite its successes, the project encountered several challenges. One major hurdle was the logistical difficulty posed by the vast distances between schools in remote areas. Additionally, coordination issues and lack of support from some District Education Board Secretary (DEBS) hindered the smooth implementation of the project. The project also faced financial constraints due to the high costs associated with transportation and logistics. Some schools also had challenges with water supply, moths infested grounds and human-animal conflicts.

PROJECT SUSTAINABILITY

We have four pillars of sustainability for Project Shanga, in this way, we will ensure that the trees grow and the morality levels are reduced.

Tree Adoption Program in Schools

This program fosters environmental responsibility in students by encouraging them to "adopt" a tree on their school campus. By caring for a specific tree, students develop a sense of ownership and learn the importance of trees in our environment. They actively participate in nurturing and watching their adopted tree grow.

Partnerships for Success

To ensure the program's success, we collaborate with passionate volunteers called "Champions." These enthusiastic individuals work directly with students, teachers, and the community to organize tree-planting activities and ongoing care. They act as ambassadors for the program, fostering a collaborative spirit.

Building a Supportive Network

We partner with the District Board Secretary's office to integrate tree care into school curriculums and ensure it receives the necessary support from school authorities. This collaboration creates a framework for coordination among school headmasters.

Expanding Our Reach

Additionally, we work closely with District Forestry Officers. These officers visit schools within their districts, providing valuable technical advice and monitoring the health of the trees. This partnership helps us extend our program across Lusaka province and ensures the long-term success of the tree plantings.
